How to install and use the Python files ?

1. Install ChromeDriver (https://chromedriver.chromium.org/downloads) and download the Python files
2. Place the *chromedriver.exe* file in the same directory than the Python ones
3. Create two directories "*bdd*" and "*csv*" in order to save the "*.npy*" and "*.csv*" files.
4. The *beta* file contains a variable named: "*company_name*". Change its name to scrap all the news related to the company you want !
